

# Pool Enclosures

Endless Summer

**E**njoy the benefits of summer sunshine all year round. Endless Summer is an experienced British company who manufacture pool enclosures which are specifically designed to suit our climate. A leisure and healthy lifestyle can carry on right through the chilly months. Enclosing your pool in its own summer environment will be a wise financial decision - it will ensure that the money you invested in your garden and swimming pool will be utilised instead of being idle for most of the year.

### Healthy Lifestyle

Your family and friends can enjoy your pool in summer-like conditions. Your home will become your personal leisure and health centre. Swimming and water sport are acknowledged as being an ideal aerobic and non-impact activity. Keep your family fit and healthy while they have fun in the sun.

### Environmental Control

An enclosure over your pool ensures that you do not waste heat energy stored in the water from the sun or from a water heater. In addition to keeping the water at an ideal and comfortable temperature the air temperature remains warm and free from cold draughts. This also reduces chemical usage saving time and money.

### Purpose-Made For Your Home & Pool

The pool enclosure is made up of a series of modular components which can be integrated to ensure that the enclosure can accommodate almost any shape pool, pool surround materials and adjoining buildings. The flexibility of the design and its adaptability will respond to your most creative and imaginative plans. Besides the standard enclosures, our custom designs include retracting, fixed, lean-to, low level and centre opening models.

### Safety

By using an aluminium and acrylic structure there is no danger from broken glass or a strained back. Smooth running and lightweight bays can be moved from partial to a fully enclosed position with very little

effort. Don't compromise your family's safety on anything but the best technology has to offer.

### Structure

Our enclosures are made from extruded aluminium sections to 6063-T6 and BS1474 specifications. British design and craftsmanship provide a unique structural system which can incorporate spans of over 13m.

### Finish

Metal surfaces are coated with a velvet smooth finish in our popular standard colours of brilliant white, racing green and dark brown. Custom colours to match a special colour scheme can be produced at an additional cost. The finish is applied in a number of spray coatings of a high-quality powdered polyester. Total adhesion to all surfaces is achieved by using a sophisticated electrostatic technology.

### Roofing

The roof sections of each bay are glazed with high-tech Makrolon® long-life polycarbonate made by Röhm. This material has a double-wall cell-structure to ensure temperature stability. This is achieved by limiting heat loss and maximising internal reflection of heat in the enclosure. Mould and algae are dramatically reduced by using a "no-drop" coating which limits the formation of condensation droplets.

### Side Walls

The side walls are glazed in a clear acrylic sheet which is 6mm thick. The material is crystal clear, light-weight, easy to maintain and very durable.

### Joining Spigots

Our joining spigots are designed to meet all loading stress requirements. We have used aluminium spigots to achieve the highest possible strength and compatibility with the rest of the aluminium structure.

### Anchoring

Each enclosure is anchored to the ground using an extremely strong and robust system. The system uses a quick-release device which requires very little effort to attach and detach.

### Fixed End Bay

The fixed end bay is permanently attached to the ground and is glazed with 6mm solid acrylic. Optional doors can be installed in this end to suit your application.

### Weather Proof

Sealing brushes, manufactured from anti-static nylon fibres, are used throughout the enclosure to ensure that wind, dust, leaves, rain and snow stay outside.

### Doors

Our folding concertina doors allow access into the enclosure in seconds. In addition to these doors we can also include a specially designed internal door, sliding doors at the rear and sides and additional windows and vents. All our doors and openings use the latest safety locks to provide security throughout.

### Rollers & Track

Each enclosure is fitted with large diameter rollers which fit exactly into the tailor made track. This ensures the enclosure returns to its exact anchor points each time it is open and closed.

If you should require further technical information please do not hesitate to contact us.
